

MUSTAFA DURMUŞ

Computer Engineer

Tel: +90 530 891 98 04 | e-mail: mustafa-durmuss@outlook.com

Summary

I like to work in the jobs that solves problems using AI. I have been interested in artificial intelligence and machine learning for about 2 years with the graduation year and I want to continue to progress in this and related fields.

Education

Vytautas Magnus University

Kaunas/Lithuania

Exchange Programme

Aug 2017 – Jan 2018

- I have participated erasmus programme in Lithuania for 5 months.

Karabuk University

Karabuk/Turkey

Computer Engineering | GPA of 3.47/4.00

Sep 2014 – 2019

- Starting from programming I took theoretical and practical valuable lessons in many areas of computer engineering and participated in various activities. I did my compulsory internship with one of my university teachers and together we developed a project using the Django framework. In my last year, I worked on my own thesis for 9 months.
- My “Graduating Project” subject was about developing deep learning application called image captioning which generates textual description of the given images using neural networks.

Work Experience

Robotics Developer

Istanbul/Turkey

HUMMINGDRONE AVIATION & AEROSPACE

Jul 2019 – Present

- I am in Robotics Development Team. The team deeply focus on making data-driven drones, using brand new approaches like: Visual SLAM, Deep NN and Reinforcement Learning and open source robotics technologies like: ROS, Gazebo and Rviz.

Internship

Istanbul/ Turkey

PROJ-E SOFTWARE

Jul 2017 – Aug 2017

- I did my first compulsory internship in this company that specializes in web-based software and strategy development. It was my first time that I used HTML, CSS, XML and similar applications severely.

Internship

Istanbul/ Turkey

TURKEY FOUNDATIONS BANK

Sep 2012 – Jun 2013

- In my high school long-term internship, I was generally interested in topics on Information Technology, Hardware, Networking.

Skills

- Python
- AI (Computer Vision, NLP, Reinforcement Learning)
- Linux (Ubuntu, Shell Scripting)
- Robotics (ROS, Gazebo, Rviz)
- Version Control System (GIT)

Volunteer Projects

Deep Learning Turkey

Istanbul/ Turkey

Jul 2019- Oct 2019

- I participated in the "Hands on AI Project" that organized by Deep Learning Turkey community and continued for 4 months. I am in the team who works on the project of Real Time Object Detection in Occupational Safety. We used approaches and applications like: YOLOV3, Amazon Web Services, RabbitMQ, Raspberry Pi.
